# GIT | CHEATSHEET

**git clone &lt;url&gt;**

clones an existing Github repository located at the address X (via HTTPS)

**git pull**

pulls the most recent online version of your repository to your local computer

**git add -A**

stages, i.e., adds all files you want to record changes for to a queue

**git commit –m "message"**

commits/records all your changes to the *local* computer with a description "message"

**git push**

pushes, i.e., transfers all your *local* changes to your online repository on Github
